Course & Title: 529-A Treatment and Management of the Edentulous Patient

Session & Topic: Denture Delivery

General goal: To develop an understanding and appreciation of the procedures employed at the delivery appointment for complete dentures.

Objectives: Upon completion of this course the student should be able to:

1. List the sequence of procedures required to deliver a complete denture.
2. Discuss the disclosing media used at the denture insertion appointment and their use.
3. Discuss the difference between a clinical and lab remount.
4. Discuss the rationale and procedures for the clinical remount.
5. Discuss the principles of occlusal adjustment for non anatomic teeth.
6. Discuss the principles of occlusal adjustment for anatomic teeth.
7. Discuss the denture care and use instructions given to patients at the time of denture delivery.
8. Discuss the follow up protocol for complete denture patients post delivery.
LECTURE IX
DENTURE DELIVERY
